

**Orangeriessoutheast.com**

Orangeries are a practical, all-year-round substitute to a standard UPVC conservatory.

Orangeries can provide the solution for properties situated particularly with a south facing aspect and offer a stylish alternative to a conservatory, providing a light and airy setting together with the practicality of access to other areas that would be inaccessible with a conventional conservatory roof.

**The South East's leading designers of Orangeries, Hardwood conservatories, windows & doors.**

A hardwood conservatory will provide an elegant addition to any home using timber that will be moulded and designed so that the framework will add style and quality to your home. We feel it important for the design to be sympathetic to the style of the existing property.

With security in mind, all our doors and windows feature the espagnolette multi-point locking system giving a greater peace of mind from standard locking systems.

Our wooden conservatories have two coats of microporous paint or stain applied in our factory prior to delivery to site. The microporous products used are flexible and allow the timber underneath to breathe.

The hardwood roof rafters are completely protected from the elements by powder coated aluminium cappings. They are sealed onto the glass with non-perishable neoprene gaskets which make the roof totally maintenance free above the gutter height.
